

INVESTMENT PORTFOLIO — ■1,00,000

Stocks · ETFs · Cryptocurrency | Hypothetical Portfolio Explanation Yash Dholakia | CodeAlpha

Finance & Investment Internship | June 2026

1. What Is This Portfolio?

This is a **hypothetical 1,00,000 investment portfolio** built as part of the CodeAlpha Finance & Investment Internship (Task 3). It is designed for a **moderate-risk investor** with a 1-3 year horizon who wants growth from Indian equities, stability from passive ETFs, and high-upside exposure through cryptocurrency — all in clearly defined proportions.

Asset Class	Allocation	Amount (■)	# Assets	Risk Level	Primary Role
Stocks (Equities)	50%	50,000	3	Medium	Long-term growth
ETFs (Index Funds)	30%	30,000	2	Low–Medium	Passive diversification
Cryptocurrency	20%	20,000	3	Very High	High-risk upside hedge
TOTAL	100%	1,00,000	8	Moderate	Balanced growth

2. Individual Holdings — All 8 Assets

Asset	Ticker	Weight	Invested	Approx. Price	Risk	One-Line Rationale
Reliance Inds.	RELIANCE	20%	20,000	1,303	Medium	Near 52-wk low; Jio IPO catalyst; AI data-centre expansion
TCS	TCS	15%	15,000	2,346	Medium	IT bellwether; 4.91% dividend yield; AI-services recovery play
HDFC Bank	HDFCBANK	15%	15,000	748	Medium	India's largest pvt bank; 5.04% yield; RBI rate-cut tailwind
Nippon Nifty 50 BeES	NIFTYBEES	20%	20,000	265.43	Low–Med	Top-50 passive index; 14.76% CAGR since 2001; 0.03% expense ratio
SBI Gold ETF	SBIGETS	10%	10,000	~81	Low	Inverse equity hedge; inflation & INR depreciation protection
Bitcoin (BTC)	BTC	10%	10,000	~59 L	Very High	Digital gold; 21M supply cap; institutional ETF adoption
Ethereum (ETH)	ETH	6%	6,000	~1.35 L	Very High	DeFi / smart contract platform; Pectra upgrade roadmap
Solana (SOL)	SOL	4%	4,000	~5,250	Very High	High-speed Layer-1; Alpenglows upgrade; 11,500+ new devs (2025)

■ Stocks grouped in green · ETFs in blue · Crypto in yellow. All prices as of June 6, 2026. Units are fractional where applicable (crypto).

3. Why the 50 – 30 – 20 Allocation?

50% Stocks — Grow

The largest chunk goes to equities because Indian large-cap stocks offer the best risk-adjusted growth over 1–3 years. Reliance, TCS, and HDFC Bank were chosen across three uncorrelated sectors (Energy/Conglomerate, IT, Banking) — they rarely all decline simultaneously. All three are currently near multi-year lows, creating a meaningful margin of safety.

30% ETFs — Protect

ETFs are the portfolio's backbone. Nippon Nifty 50 BeES (20%) gives instant diversification across India's top 50 companies at just 0.03% annual cost — compounding at ~14.76% CAGR since 2001. SBI Gold ETF (10%) acts as an inverse hedge: when equities fall, gold tends to hold or rise, cushioning overall drawdown.

20% Crypto — Speculate (Controlled)

Crypto is the high-conviction wing — aggressive enough to meaningfully impact returns if the market recovers, but capped at 20% so it cannot destroy the portfolio. BTC anchors it (store of value), ETH adds DeFi exposure, and SOL is the smallest, highest-risk position. A 30–40% drawdown from entry triggers reassessment; a 2x return triggers partial profit-taking.

4. Risk Management & Review Timeline

Asset	Risk	Key Mitigation
Stocks	Medium	Blue-chips only; max 20% per stock; 3 uncorrelated sectors
Nifty 50 ETF	Low–Medium	50-company spread; 25-yr performance history; 0.03% cost
Gold ETF	Low	Inverse equity correlation; liquid on NSE; no storage risk
Cryptocurrency	Very High	Hard cap 20%; stop-loss at -30–40%; regulated Indian exchanges only
Horizon	Action	Target Value
0–6 Months	Hold; rebalance if drift >5%	95,000–1,05,000
6–12 Months	Book 50% crypto if it 2x from entry	1,05,000–1,15,000
12–24 Months	Full reassessment; add to ETF base	1,15,000–1,30,000 (+15–30%)

5. Bottom Line

Every rupee in this portfolio has a defined purpose. The **50,000 in stocks** bets on India's corporate giants at historically attractive entry points. The **30,000 in ETFs** quietly compounds and protects — regardless of which individual stock wins or loses. And the **20,000 in crypto** participates in the digital asset cycle with enough conviction to matter, but enough discipline not to damage the broader portfolio if wrong.

Together, these 8 assets span 3 geographies of capital (Indian listed, US-cross-listed, global crypto), 5 sectors, and 3 distinct risk tiers — making it a genuinely diversified portfolio, not just a collection of random picks.
